

Appendix 3-DNA profile for Thomas Estep Sr. descendant.

The following DNA profile is for a descendant from John Estep who was the son of Thomas Estep Sr. John Estep was the brother of Samuel Estep who married Susannah Adams in Rowan County, N. C. This Y-DNA profile is a match to the descendants from Zachariah Adams of Wilkes County, N. C. Refer to the list of FT-DNA matches on the following page and you can see that there are two Adams who match on 36 of 37 markers and one who matches on 35 of 37 markers. My conclusion is that a paternal line Adams took the Estep surname about 1850 and was descended from a common ancestor as those who match this profile. So the real truth is that there are four different profiles, all supposedly from descendants from sons of Thomas Estep Sr. The real Thomas Estep Sr. profile has not been proven.

**On 5/19/2003, these values were adjusted down by 1 point because of a change in Lab nomenclature.

***A value of "0" for any marker indicates that the lab reported a null value or no result for this marker. All cases of this nature are retested multiple times by the lab to confirm their accuracy. Mutations causing null values are infrequent, but are passed on to offspring just like other mutations, so related male lineages such as a father and son would likely share any null values.

Lee Henry Estep's Y-DNA profile:

Lee Henry Estep is descended from Abner Estep, the brother of Rutha Estep Thompson. Both siblings were the children of Henry Estep, probable son of Samuel Estep and Susannah Adams Estep. Refer to Henry Estep Family DNA Analysis for documentation showing family finder matches to this family and a map of the locations where the cousins lived in Rowan/Davie County, N. C. Henry's paternal line Y-DNA profile matches to the Caleb and Phebe Terry Horton ancestral line, probably through their descendant Nathaniel Horton. This is confirmed by Y-DNA matches to the family and by a family finder match to a direct descendant from Nathaniel Horton.

FTDNA DYS markers

We provide the actual scientific Allele values and DYS #'s for your results unless the markers were discovered at the University of Arizona and do not have a publication schedule. When that situation occurs we provide your results in "scores" to allow us to use the marker without compromising the discoverer until publication dates have been established.
